

What You Should Know About Vaccines!

What has been kept behind closed doors is now something the public deserves to know. Too many innocent lives have been sacrificed. Too many young brains have been compromised. Disorders such as autism, pervasive developmental delay, attention deficit disorder, childhood diabetes, chronic asthma and allergies, reoccurring ear and sinus infections and a myriad of other immune system breakdowns are rising more rapidly than naturally and environmentally possible. Something pervasive, consistent, and highly profitable is happening to make way for all of these conditions.

The Autism/ Vaccine Link

Autism is a syndrome characterized as not being able to socialize with other people. Twenty five years ago, autism affected 1 in 10,000 children. In the 1990's, it affected 1 in 500. In the year 2000, it was 1 in 250. Today it is 1 in 166. Additionally, 1 in 6 kids, today, is affected with speech delays, learning disorders, and behavioral problems

Autism rates have climbed in both the United Kingdom as well as in the United States, at the same time the MMR was introduced. The MMR vaccine was introduced in the US in 1975 and in the UK in 1988, and autism rates rose shortly thereafter

According to Center for Disease Control (CDC), it is recommended that children receive 54 shots from 14 different vaccines by the time the children are 12... Nineteen of these vaccines are given to small infants 6 months old and younger that have vulnerable and immature immune systems (Kirby, 48). We are told by the government that vaccines are safe, effective and can cure any disease known to man.

However, there is a lot of information available to everyone that states that vaccines are dangerous, can cause brain damage and even death. What is even worse is there are no long term safety studies on any vaccination or immunization. This is because all studies only look at short term vaccine reactions which include those within hours or only a few days

A Successful & Profitable Industry

Vaccines are produced by large, powerful pharmaceutical companies. They are self regulated. Doctors are staffed, hired and paid by the same companies to insure that the vaccine products are safe. There is no objectivity.

Profits from these companies are in the hundreds of billions of dollars. With regards to accountability and restitution, parents do not have much recourse because the system won't allow you to sue the companies directly...

The basic motive for the vaccine manufacturers is to make a profit. This can be done easily because the government insures that the vaccine companies are well protected. Congress allows more than 1 billion dollars to federal health agencies to develop, purchase and promote the mass use of vaccines. Yet, the U.S. Government spends nothing in funding independent research...

In order to combat the unfairness regarding vaccine issues, all one can do is become informed. Education is very important in order to stay healthy. For instance, many people think that you have to have vaccines to enter school. In all actuality, you don't. Technically, these are only "recommended" shots.

Every person has the right to say *no* to vaccines. There are exemptions available in every state for every kind of school, institution, and workplace.
